

An Easy-to-Use Tool for Quick and Accurate ACH Payment Processing

Designed for merchants, accounting professionals, check processing companies, payroll administrators and others within financial and corporate institutions, EPICWare™ offers smart routing for the busy company.

What is EPICWare?

Developed in conjunction with NACHA—The Electronic Payments Association, this indispensable product combines active U.S. routing and transit numbers with institution demand deposit account number information to help you reduce ACH transaction failures, notification of changes, returns and more.

Why do I need EPICWare?

Did you know that many administrative payment-processing returns are the result of incorrect account number structures? Without the proper routing information, your payment transactions may be delayed and even subjected to fines. Use EPICWare to avoid the frustration with electronic payment processing and the costly return fees.

What EPICWare can do for you

EPICWare is conveniently available in two formats that will fit the needs of any company. Accuity provides EPICWare in both a stand-alone PC version as well as a flat file for integration within your existing payment software.

- > **EPICWare PC** — Installed directly on your desktop, this version allows you to research and verify correct routing and account number information with just a few clicks of a mouse. The application provides ACH override routing numbers and account number repair algorithms for quicker processing.
- > **EPICWare File** — For a large volume of ACH transactions, the EPICWare File can analyze batches of routing numbers and account configurations and provide ACH override numbers and account number repair algorithms automatically. It is integrated into your current payment processing software for seamless repair and correction of ACH messages.

As the Official Registrar of ABA Routing Numbers since 1911, we ensure the most current and accurate information available. In addition, EPICWare is continuously updated and distributed monthly for increased efficiency.

EPICWare provides essential routing information that expedites processing for any transaction volume
